

Maher Sanctuary Description

TERRAIN:

The Maher Sanctuary contains a series of wetlands surrounded by glacial features. Wetlands include a sedge meadow, a marl pond, an extensive shrub swamp and two branches of Caine Creek. There is a nice meadow along the south loop of the main circle trail. Because of the wetlands, much of this trail is boardwalk.

VANTAGE POINTS:

From the parking area on 108th, a trail leads to the main circle trail. Other features may be reached from this trail including the trail to the artesian well in the southeastern corner of the sanctuary and the bridge across Caine Creek that leaves you on your own.

SPECIES TO BE SEEN:

A variety of wetland and woodland birds nest here and migrants pass through. Common Yellowthroat, Chipping Sparrow and Swamp Sparrow are summer residents. Nests have been found of Yellow Warbler and Gray Catbird. Look for Ruffed Grouse in any season.

SPECIAL SIGHTINGS:

Yellow-breasted Chats have been found near the marl pond. Screech Owls have been found roosting in several locations. Common Snipe may be found "winnowing" over wetlands in spring. Some of the best sightings here are plants, not birds.

HAZARDS:

Wet feet are likely if you stray from the boardwalk. Even on the trail wet and muddy areas are possible. Watch for poison ivy growing along the trail and up through the boardwalk.

GENERAL:

A variety of experiences is possible here. Often more plants are seen than birds, but the plants are generally quite unusual. Some of the bird experiences are very memorable. Frogs, butterflies and other wildlife are common here, and it's always an interesting place for a hike.

RULES OF USE:

This is a wildlife sanctuary and environmental study area to be enjoyed quietly by: hiking, looking, listening, photographing and sketching. Therefore - NO - picking, collecting, loitering, smoking, alcohol or hunting. NO bikes, radios, skateboards, pets or motorized vehicles. Stay on marked trails. Wildlife needs areas of no contact with humans or their pets.
